

Introduction

The present study aims to investigate the impact of the 2012-2013 season's drought on the water resources of the Tago river basin. The study is based on the analysis of the hydrological data of the Tago river basin, which is one of the most important water resources in the region. The study is divided into two main parts: the first part is devoted to the description of the hydrological data and the second part is devoted to the analysis of the impact of the drought on the water resources of the Tago river basin.

1.1. Objectives

- To determine the impact of the drought on the water resources of the Tago river basin.
- To determine the impact of the drought on the water resources of the Tago river basin.
- To determine the impact of the drought on the water resources of the Tago river basin.
